(57) Abstract :

Exemplary embodiments of the present disclosure are directed towards a power generation system by noise, comprising: a plurality of diaphragms 110 configured to create a plurality of vibrations, whereby the plurality of vibrations given to at least one piezoelectric material 102, the at least one piezoelectric material 102 positioned in a magnetic field 104, the at least one piezoelectric material 102 configured to make links with the magnetic field 104 in the form of transformer action and produces electromotive force.
