Research Ethics

Researchers follow the following ethical norms:

i. No falsification of data: Manipulation of research process or experimental setups not allowed. All research records are to be properly maintained.

ii. No fabrication of data is to be carried out. The research output results should be faithfully reported.

iii. Plagiarism refers to the appropriation of another person's ideas, processes, results, or words without giving proper credit. While publishing research papers plagiarism should be totally avoided.

Ethical principles as specified by professional societies like Institution of Engineers (India), IEEE, ASME, ASCE, AICTE and UGC are scrupulously followed.
