(57) Abstract		

(57) Abstract :

Exemplary embodiments of the present disclosure directed towards a system and method for connecting users in real-time to fascilitate farming activities, comprising: computing devices operated by a plurality of users, the plurality of users able to give number of requests on the plurality of computing devices through a farming activity facilitating module, the farming activity facilitating module configured to notify a plurality of laborers of a predetermined radius of the point of request raised by the users on the plurality of computing devices; and a server communicatively coupled with the plurality of computing devices through a network, the server configured to collect the number of requests the plurality of computing devices, and a database configured to store user's data separately who are using the farming activity facilitating module, the server communicates with the database through the network for storing the users profile information.
