(57) Abstract :
Exemplary embodiments of the present disclosure is directed towards an apparatus to turn pages. It relates to an arrangement for controllably turning pages in a book more particularly, to a compact, portable and quiet unit for reliably turning pages, one at a time, in a hands-free manner. The apparatus is configured with table stand with a strip(solid piece), a first DC motor, simulator including a receiver and a transmitter, a battery and a second DC motor with wheels. The apparatus is an arrangement for turning pages successively that picks up each page by the rotation of two wheels and turns the page over. A power switch at the foot initiates the turning by activating the simulation. The arrangement is mountable at diverse locations and is quiet in operation and easily accessible. The apparatus is simple and accessible by the foot; is easily accessible by the handicapped for turning of the pages. FIG. 1
